Tasks

===========================

1. First of all using https://bcrypt-generator.com/ change user password as your own and login to system

2. Make a New Menu for a New Page in side nav https://prnt.sc/pj1xbj

3. Make a list view page of buffer_posting table data as same like https://prnt.sc/pj1wsl and and the search and filter options should work like authentic way. For example Date picker https://prnt.sc/pj1xp8 and Group type https://prnt.sc/pj1y3i filter

4. There only few tables in Database and they very simple structured and have simple relations which will not take much time to understand

5. List should have pagination like https://prnt.sc/pj1yee this default way and the pagination should work in filter mood also. For example, if you select on one date the pagination should work only between the value of that specific dates. i;e: https://prnt.sc/pj1zqr pagination URL should be like this
